

---

# SETUP

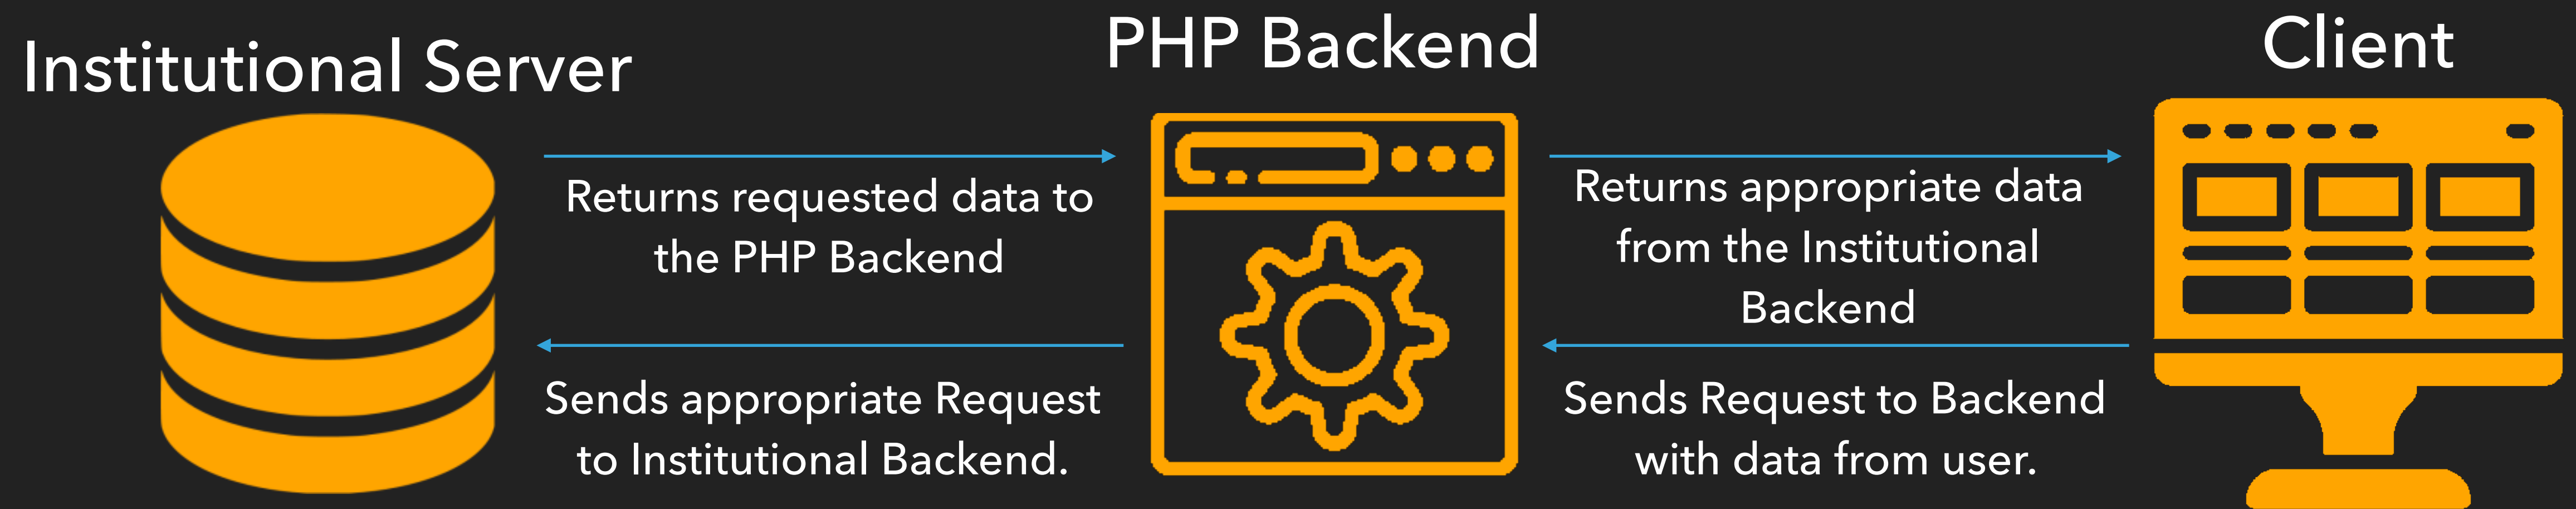

- ▶ Clone/pull the Tutorials Repo.
- ▶ Navigate to the `student_app_tutorial` folder in your terminal.
- ▶ Run `npm install` while inside `student_app_tutorial` folder in your terminal.
- ▶ Copy the `apimock` folder to your `Sites` folder in the root directory.

**BERKELEY LAW**

---

# SEATING CHART

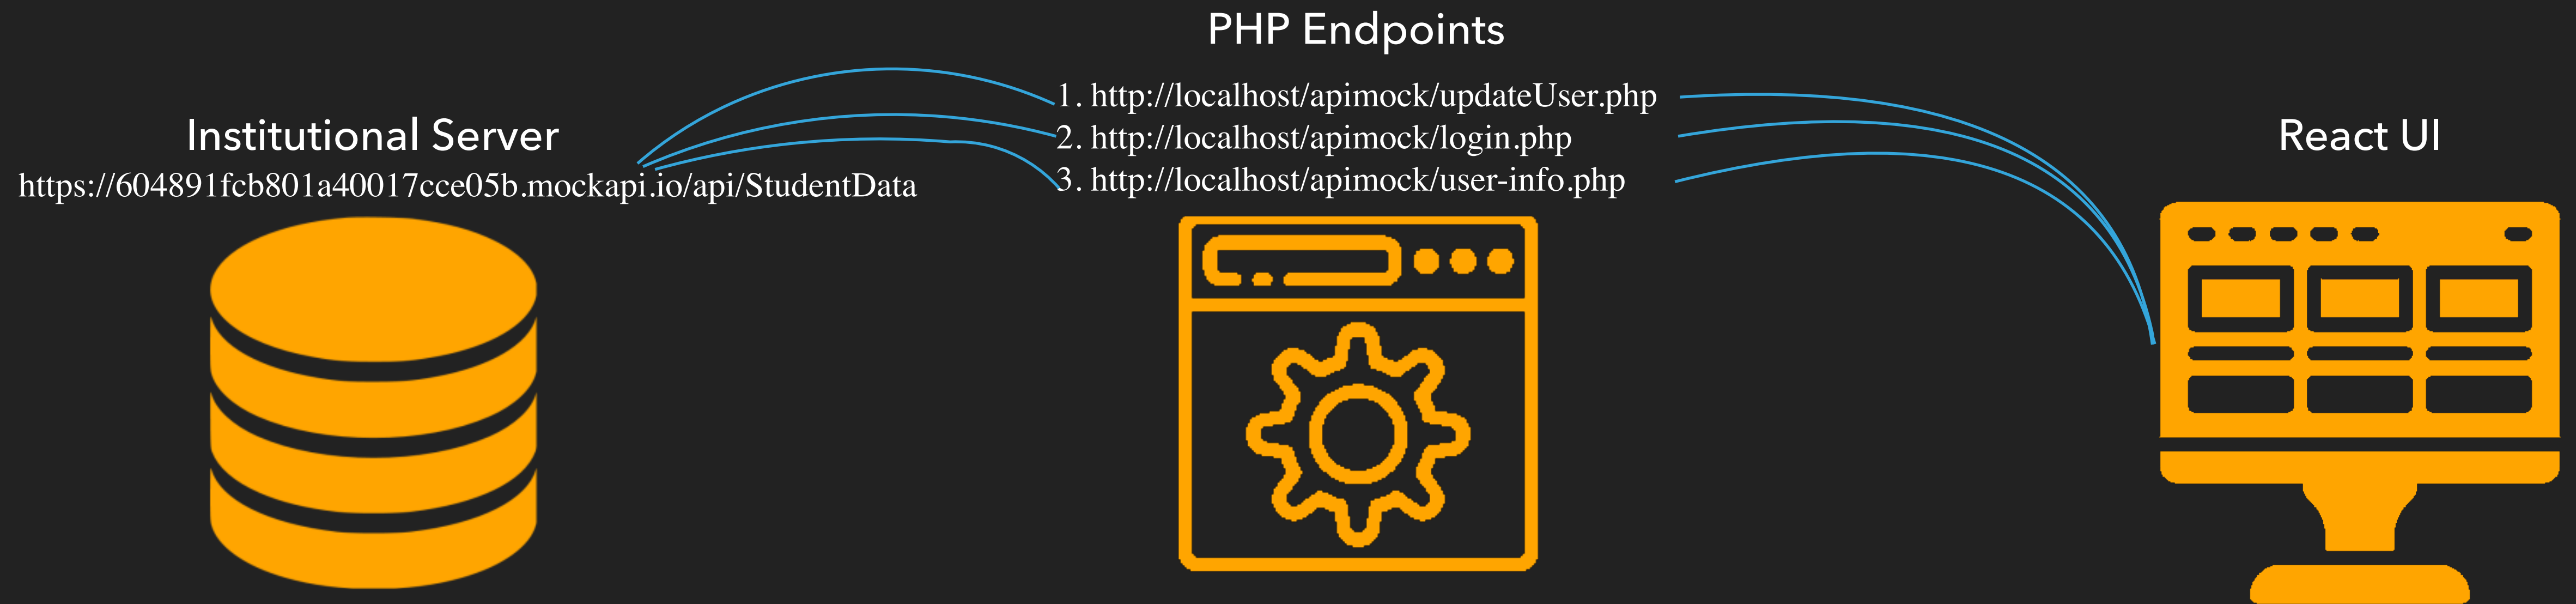

**INFRASTRUCTURE**

## Questions

1. Why can't the client directly request data from the Institutional Backend?
2. What is the difference between requested data and appropriate data?

# How does this translate to our application?

---

## login.php

```
{
  Username: "siddhant_sharma",
  Password: "password"
}
```

## updateUser.php

```
{
  "id": "1",
  "firstName": "Siddhant",
  "lastName": "Sharma",
  "username": "siddhant_sharma",
  "pronouns": "he/him/his",
  "img": "../Photos/test.jpg",
  "classes": [
    "Berkeley Law",
    "CS61A"
  ],
  "password": "password",
  "sID": 201
}
```

## user-info.php

Pass in jwt token in the header of the request to the api.
